In an ever-expanding city, one young man claims the job of his dreams, operator of the tallest crane around. Since others envy his position, he never leaves his crane, always eager for the day—and work—to begin. As the seasons pass, man and machine almost become one. "The crane was a giant with iron sinews, and the craneman was its heart." Then people begin to hoard their goods, grinning ravens multiply throughout the land, and war is at hand. But the craneman never falters, remaining at his post even when the land is flooded, ready for reconstruction to begin. "The fielding of automated flight controls and weapons systems in fighter aircraft from 1950 to 1980 challenged the significance ascribed to several of the pilots' historical skillsets, such as superb hand-eye coordination--required for aggressive stick-and-rudder maneuvering--and perfect

eyesight and crack marksmanship--required for long-range visual detection and destruction of the enemy. Highly automated systems would, proponents argued, simplify the pilot's tasks while increasing his lethality in the air, thereby opening fighter aviation to broader segments of the population. However, these new systems often required new, unique skills, which the pilots struggled to identify and develop. Moreover, the challenges that accompanied these technologies were not restricted to individual fighter cockpits, but rather extended across the pilots' tactical formations, altering the social norms that had governed the fighter pilot profession since its establishment. In the end, the skills that made a fighter pilot great in 1980 bore little resemblance to those of even thirty years prior, despite the precepts embedded within the "myth of the fighter pilot." As such, this history illuminates the rich interaction between human and machine that often accompanies automation in the workplace. It is broadly applicable to other enterprises confronting increased automation, from remotely piloted aviation to Google cars. It should appeal to those interested in the history of technology and automation, as well as the general population of military aviation enthusiasts."--Provided by publisher. Last year, the war in Syria became a melee—the US, Russia, NATO, Saudi Arabia, Iran, Turkey, Lebanon and some others struggled to bring peace to the region. But each stakeholder hankered after a different

end state—President Bashar al-Assad’s continuance in power became a contentious issue. In due course of time Syria and the Islamic State in Syria (ISIS) jumped the order of priorities for the US forces in the area. In importance, they have left behind the drawdown in Afghanistan, which has been back-burnered provisionally. As it appears, garnering the support of the countries of the region like India, Japan, South Korea, the Philippines, etc. to counter the rise of China, will continue to be high on the US agenda. Likewise, lifting of sanctions against Iran, following its rapprochement with the West will influence the world in many ways. The fallout of the testing of the hydrogen bomb by North Korea, the South China Sea imbroglio and Indo-Pak relations in the wake of the Pathankot terror strike too will cast their shadows on the geo-politics of the region in 2016. Evading war and conflict in the prevailing environment is an effort; economic interests and geo-political compulsions make the choice of alignment difficult for peace-loving nations of the world. They are faced with the dilemma of evading armed conflicts. It requires a conscious and sustained effort to do so. In order to work towards such goals, it is necessary to look at the geo-political, security and military-related issues objectively. The Centre for Air Power Studies (CAPS) has been publishing the Asian Defence Review to fulfill this need. This volume, a resource base for both the professional and general readers, is the ninth in the series under this title. It

aims to add to the pool of information and knowledge in the current strategic discourse dealing with military strategy, defence, politics and trends in military capabilities that impact Asia. In particular, it covers some of the important issues related to India's security environment, the Indian Air Force, cyber warfare, nuclear security, warfare technologies, export control regimes, Russia, China and Pakistan. Never Lark nor Eagle: A Fighter Pilot's Story, the novel by Ray Castagnaro, is accurate, entertaining Historical fiction about Yanks in the RAF during the Battle of Britain, and their eventual transition to the U.S. Army Air Forces. The story continues with dangerous test flying at Muroc Lake, California, then the exploits of the "Fourth but First" Fighter Group in Korea. The reader witnesses

counterinsurgency in the jungles of the Philippines, espionage in 1950s Saigon, and hypersonic test flying at Edwards. It climaxes with the electrifying, but often overlooked air campaign over Vietnam. As told through the saga of one extraordinary American family, the story of the most exciting period in aviation history is told with historical accuracy, passion, and humor. You will need to have both Volumes I & II to read the whole story. VOLUME II: Continuation of the fictional career of fighter pilot Carl "Bing" Morro and his family, from 1958 through 1978. Col Carl Morro, now a veteran of combat in WWII and Korea, as well as dangerous test pilot flying and espionage in Southeast Asia, returns to his roots to face an undeniable truth. The reader continues to witness the true, and often humorous stories behind today's aeronautical wonder weapons through the fictional eyes of a man who helped develop them and their tactics from the early supersonic era through the Vietnam conflict. Triumph, tragedy, love, war, revenge, deliverance. © 1980, 1990, 2002 Rocket and air-breathing propulsion systems are the foundation on which planning for future aerospace systems rests. A Review of United States Air Force and Department of Defense Aerospace Propulsion Needs assesses the existing technical base in these areas and examines the future Air Force capabilities the base will be expected to support. This report also defines gaps and recommends where future warfighter capabilities not yet fully defined
