Today the theory of evolution by natural selection and the science of genetics are the twin keys to our understanding of how life on earth came about. Yet when an English naturalist called Charles Darwin first published his ideas in 1859 in a book called *On the Origin of Species* the world was horrified at the notion of a changing creation without the intervention a Creator. By contrast, when a few years later an obscure Moravian monk, Gregor Mendel, published the results of his experiments in genetics the world failed to notice John Scotney's new book explains just what these two great men had discovered and follows the amazing development of this seminal idea from the decade when it turned the world on its head to the present time and the unravelling of the human genome. It describes how the first dinosaur fossils were believed to be the bones of giants and how little by little the ongoing story of living creatures has been assembled until we can see the thread of life running from single-cell microorganisms to primates like ourselves, and why most ancient creatures died out and some survive to this day. Indeed we still carry vestiges of former life forms in our bodies and it is said that ancient seas flow in our blood. Anatomy, taxonomy, chemistry, geology, archaeology, and embryology have all had a part in this remarkable detective story, and even the Cold War became involved when the followers of Mendel in the West were confronted by those of Lamarck in China and Russia. Modern evolutionary theory is shown to be a synthesis of many scientific fields and the product both of years of tireless work and of sudden imaginative leaps. The Theory of Evolution conveys the excitement of this fundamental discovery and gives an insight into the way scientific enquiry and debate continue to shape our world.

The old cliché states that not every manager is a leader, but the more important part of that sentiment is that to be a good manager, one has to be a good leader. This perception is because good managers do more than manage. They have to lead by inspiration, they have to lead by example, and they have to lead through the best times for their organizations as well as the absolute worst times. *A Systematic Guide to Leadership Selection Using Total Quality Management Techniques* identifies the application gap and presents a methodology based on Total Quality Management (TQM) to support the guidance of a process to select leadership (at any level of the organization). A modification

to the House of Quality and a product of the Massachusetts Institute of Technology is presented and discussed as the core of a leader selection process. Two case studies are used to reinforce the concepts and applications. Finally, the book introduces some experiments for leadership development using virtual worlds and ends with a note for the future using the metaverse and digital twins for leadership. The book is intended for professionals and executives wanting to learn more about leader selection, engineering and business students, directors of human resources, and researchers in the field of leadership.
